## **DWA\_08 Discussion Questions**

In this module you will continue with your "Book Connect" codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

Using Class - like Containers to bundled together into a single package Constructor - like this.matches = matches Set your own variables for more info and better understanding of the code

2. What parts of encapsulating your logic were hard?

To define the Logic and Behaviour in a Encapsulation

3. Is abstracting the book preview a good or bad idea? Why?

It is a good idea, because you can combine the code in a more easier way to read or to maintain, also organize the code in more object programming or a function programming way
